                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Qy
                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                       of DNA from Ricinu communis, Zanibariensis variety. Patent discloses many modifications of ricin in which the lectin binding function of the B chain is diminished or removed, and conjugation to toxins to eliminate cell binding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modified ricin molecules and toxin conjugates - in which the lectin binding function of the B chain is removed or diminished to reduce cell binding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; fig 1; 51pp; English

The agent is able to enter all HIV susceptible cells, and not just cells known to act as host cells for the virus. The antiviral agent remains inert in a cell unless the cell is infected with the HIV virus, where the viral protease activates it. Ricin's mechanism of action is through inactivation of cellular ribosomes and enhancement of binding of the antiviral agent to galactose residues on cell surfaces, and its cellular internalisation. The invention is useful infections, especially retroviral infections. The antiviral agent is activated in viral particles or early-stage infected cells, killing the viral genome into the host genome thereby preventing the integration of the viral genome into the host genome thereby preventing the latency/rebound

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The full length sequences encoding ricin A (AAN70520), ricin D C (AAN70525) putative ricin E (AAN70526) and RCA (AAN70524) in precursor CC form were obtained, using the messenger RNA to obtain a cDNA library and CC then probing the library to retrieve the desired cDNA inserts. The CC (Library was probed using the 35-mer given in AAN70514. Figure 4 (see CC AAN70520, AAN70521, AAN70522), shows the nucleotide sequences of three CC (Library was probed using the 35-mer given in AAN70517. The cDNA inserts obtained by probing a cDNA library CC for sequences encoding ricin B using the probe in AAN70517. The cDNA inserts can be placed into expression vectors. Site-directed mutagenesis may be used to place an Arg start codon and a Hindill CC site at the beginning of the mature protein, (see AAN70518). The CC coding sequences of the inserts can be ligated into expression CC (AAN70523) and suitable retroregulators.

CC (AAN70523) and suitable retroregulators.

                                                                                                                                                                                        QΥ
                                                                                                                                                                                                                                                                                                          This polypeptide comprises the castorbean cytotoxin, ricin.

CDNA (see AAT91638) encoding the enzymatic A domain and a portion CC of the A-to-B linker peptide of ricin was used to construct a cricin-diphtheria toxin B'-interleukin-2 gene that was expressed in CC conditions involving over-production of cells bearing IL2 receptors, CC conditions involving over-production of cells bearing IL2 receptors, CC such as certain T-cell lymphomas and organ transplant rejection CC rises. The hybrid inactivates ribosomes in cells bearing IL2 creeptors, resulting in cessation of protein synthesis and death of CC target cells. Claimed hybrid proteins comprise a translocation CC domain and a cell binding domain from e.g. a hormone, growth factor CC or polypeptide toxin. The hybrid molecules can be used for the CC (labels) into cells. The use of a translocation mechanism ensures CC that the hybrid will be effective in relatively low doses, since a high proportion of the substance of interest will be taken into the CC targeted cells. The hybrid molecules can be manufactured as a CC single hybrid recombinant protein, permitting reproducibility, CC consistency, and the precise control of composition.

                                                                                                                              The invention relates to a recombinant DNA molecule encoding a hybrid coprotein comprising three parts: (a) the first part comprises a portion of the binding domain of a cell-binding polypeptide ligand allowing the chybrid protein to bind to an animal cell; (b) the second part comprises comparises a portion of a translocation domain of a naturally occurring protein context, IT toxin, C3 toxin, botulinum neurotoxin, ricin, cholera context, IT toxin, C3 toxin, biga-like toxin, pertussis toxin and tetanus context, which translocate the third part of the across the cytoplasmic commitment into the cytosol of the cell; and (c) the third part comprises compared to the naturally occurring protein of (b). This sequence represents the context of the cell of the cell, which is non-native convertion. The hybrid molecule enables the direction of appropriate convention. The hybrid molecule enables the direction of appropriate convention of the disease. The hybrid is especially used in treating cellular enzyme to affected cells, allowing them to function properly and convention diseases, by delivering to affected cells an enzyme conventional convention according to a scarce precursor or cofactor, to directing toxins convention according to affected cells of a scarce precursor or cofactor, to directing toxins convention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 25-APR-1985;

This sequence represents the Ricinus communis ricin protein sequence. The toxin can be included in the hybrid protein of the invention and used to destroy or modify the cell that the hybrid protein is targeted to. The hybrid protein comprises a first part which is a portion of the binding domain of a cell-binding ligand, effective to cause the hybrid molecule to bind to a cell of an animal. The second part comprises a portion of a translocation domain of a naturally occurring protein (e.g. the translocation domain of diphtheria toxin) the second part translocates the third part across the cytoplasmic membrane and into the cytosol of
                                                                                                                                                                                                                                                       22-DEC-1989;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the cell. The third part comprises a chemical entity to be introduced CC into the cell, where each of the first and third part is non-native with CC respect to naturally occurring protein, and the covalent bond attaching CC the second and third part is cleavable. The toxin represented by the Protein. The cell binding domain binds to a specific cell and the CC present sequence can form part of the third portion of the hybrid CC protein. The cell binding domain binds to a specific cell and the CC translocation domain transfers the hybrid molecule across the cell CC translocation domain through a cleavable bond, can then carry out its function. The hybrid molecules are useful for treating genetic deficiency classes by delivering to affected cells an enzyme supplying the missing function, to supplement cellular levels of a particular enzyme or a scarce precursor or cofactor, to direct toxins or other poisons to cleatroy particular cells (such as adipocytes, cancer cells, or virus-infected cells), and to counteract viral infections such as HIV by introducing into appropriate cells antibodies to viral proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

The invention relates to a novel toxin (e.g., ricin) compared antiviral agent which is toxic to virus-infected cells, but con-toxic to uninfected cells. The invention has anti-HIV and virucide activities. Its mechanism of action is through inactivation of cellular ribosomes and enhancement of binding of the antiviral agent to galactose considues on cell surfaces, and its cellular internalisation. The collular internalisation is useful for treating human immunodeficiency virus infection compared to an other viral infections, especially retroviral infections. The contiviral agent is activated in viral particles or early-stage infected colls, killing the cells upon infection and effectively preventing the latency/rebound problem. The agent enters all HIV susceptible cells, cand not just cells known to act as host cells for the virus. The coll after the virus agent remains inert in a cell until degraded in it, unless the coll is infected with the virus, where the viral protease activates it.

Title: Perfect score:

US-10-083-336A-3 1020 1 IFPKQYPIINFTTAGATVQS.....ARFQYIEGEMRTRIRYNRRS 198

Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5

127863 seqs, 47026705 residues

Total number of hits satisfying chosen parameters: 127863

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt\_41:\*

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      "X-ray structure of recombinant ricin A-chain at 1.8-A resolution.", Mol. Biol. 244:410-422(1994).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pauptit R.A.;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -RAY CRYSTALLOGRAPHY (2.5 ANGSTROMS) OF
for cell agglutination. The galactopyranoside moleties.

CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at catalytic active moleties.

Specific adenosine on the 28S rRNA.

SUBUNIT: Disulfide-linked dimer of A and B chains.

SUBUNIT: Disulfide-linked dimer of A and B chains.

DOMAIN: The B chain is composed of two domains, each domain consists of 3 homologous subdomains (alpha, beta, gamma).

PTM: THE MAJOR A-CHAIN IS GLYCOSYLATED ALSO IN POSITION 271.

MINOR A-CHAIN IS GLYCOSYLATED ALSO IN POSITION 271.

SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                X., Hollis T.,
                                                                                                                                                                                                                                                                                                                                                                            synthesis. The A chain can inactivate a few thousand ribosomes per minute, thus inactivating them faster than the cell can make per words. A single A-chain molecule can therefore kill an animal cell. The B chain binds to cell receptors and facilitates the entry into the cell of the A chain; B chains are also responsible for cell agglutination (Lectin activity). It binds to beta-D-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: Ricin is higly toxic to animal cells and to a less extent to plant cells. The A chain is responsible for inhibiting protein synthesis through the catalytic inactivation of 60S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  specific adenine residue from an exposed loop of 28S ribosomal RNA. As this loop is involved in the binding of elongation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ribosomal subunits. It acts as a glycosidase that removes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        factors, the modified ribosomes are unable to support protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       39:1723-1728(2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Robertus

Purification and physicochemical properties of ricins and agglutinins from Ricinus communis.";
Bur. J. Biochem. 105:453-459(1980).
-I- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at opening the specific adenosine on the 28S TRNA.
-I- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.
-I- SIMILARITY: Contains 2 ricin B-type lectin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ol-JAN-1988 (Rel. 06, Created)

"Studies on crystal structures, active-centre geometry and depurinating mechanism of two ribosome-inactivating proteins.";
Biochem. J. 309:285-298(1955).
-i- FUNCTION: TRICHOSANTHIN IS AN ABORTION-INDUCING PROTEIN. IT IS CAPABLE OF INHIBITING HIV-1 INFECTION AND REPLICATION. IT INACTIVATES EUKARVOTIC 60S RIBOSOMAL SUBUNITS.
-i- CATALYTIC ACTUVITY: Endohydrolysis of the N-glycosidic bond at Specific adenosine on the 28S IRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Scientific evaluation of Tian Hua Fen application.";

"Crystal structure of abrin-a at 2.14 A.";
J. Mol. Biol. 250:354-367(1995).
-I- FUNCTION: THE A CHAIN IS RESPONSIBLE FOR INHIBITING PROTE.
SYNTHESIS THROUGH THE CATALYTIC INACTIVATION OF 60S RIBOSI
SUBUNITS BY REMOVING ADENINE FROM POSITION 4,324 OF 28 S;
BUSUNITS BY REMOVING ADENINE FROM POSITION 4,324 OF 28 S;
ABRIN-A IS MORE TOXIC THAN RICIN.
-I- FUNCTION: THE B CHAIN IS A GALACTOSE-SPECIFIC LECTIN THAT
FACILITATES THE BINDING OF ABRIN TO THE CELL MEMBRANE THA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                P11140; P28589;

Hirayama H., Funatsu G.;
"Complete amino acid sequence of luffin-b, a ribosome-inactivating protein from sponge gourd (Luffa cylindrica) seeds.";
Agric. Biol. Chem. 55:229-238(1991).
- CATALYTIC ACTIVITY: Encohydrolysis of the N-glycosidic bond at one specific adenosine on the 28s rRNA.
-1- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           28-FEB-2003 (Rel. 19, Last sequence update)
28-FEB-2003 (Rel. 41, Last annotation update)
Ribosome-inactivating protein luffin-B (rRNA N-glycosidase)
(EC 3.2.2.22).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Luffa cylindrica (Smooth loofah) (Sponge gourd).

"Momordin II, a ribosome inactivating protein from Momordica balsamina, is homologous to other plant proteins.";

Nucleic Acids Res. 20:4662(1992).

-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S rRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-DEC-1992 (Rel. 24, Last sequence update)
